

How many area hospitals have
a comprehensive team of
experts to help older adults
get the most out of life?

One.

The Center for Geriatrics at Bridgeport Hospital offers a highly specialized, coordinated treatment program led by board-certified, fellowship-trained geriatricians who provide geriatric assessments, home visits, geriatric psychiatric services, outpatient and outreach programs and more. With all this expertise, it's no wonder that we have one of the busiest inpatient consultation services in the nation and why the country's future geriatric experts come to Bridgeport Hospital for advanced training through our accredited fellowship program.
